THE COMPANY

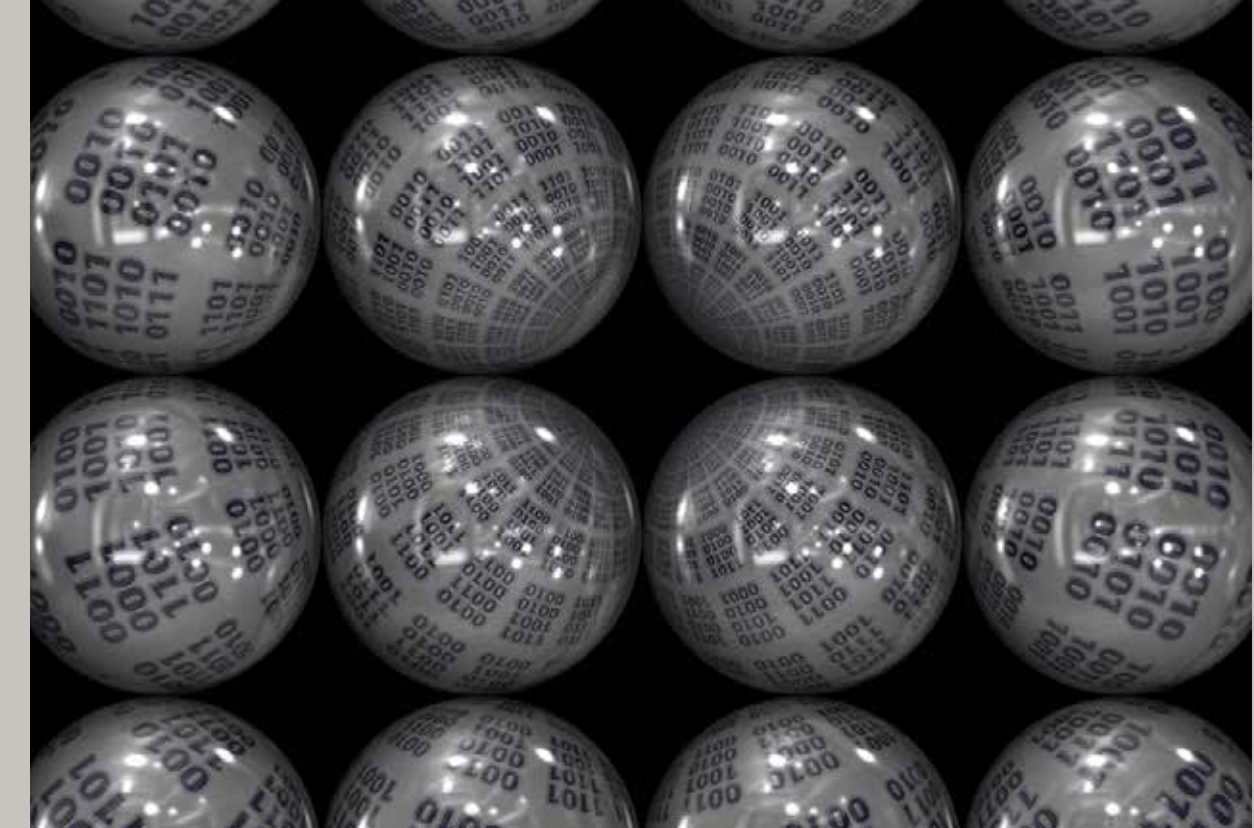

Our Mission: To produce furniture solutions combining craftsmanship, design, technology and exquisite materials. This is the purpose of our Company since its establishment. Every product, designed and manufactured entirely in Italy, is exclusive and “shaped” in order to satisfy specific needs of the customers.

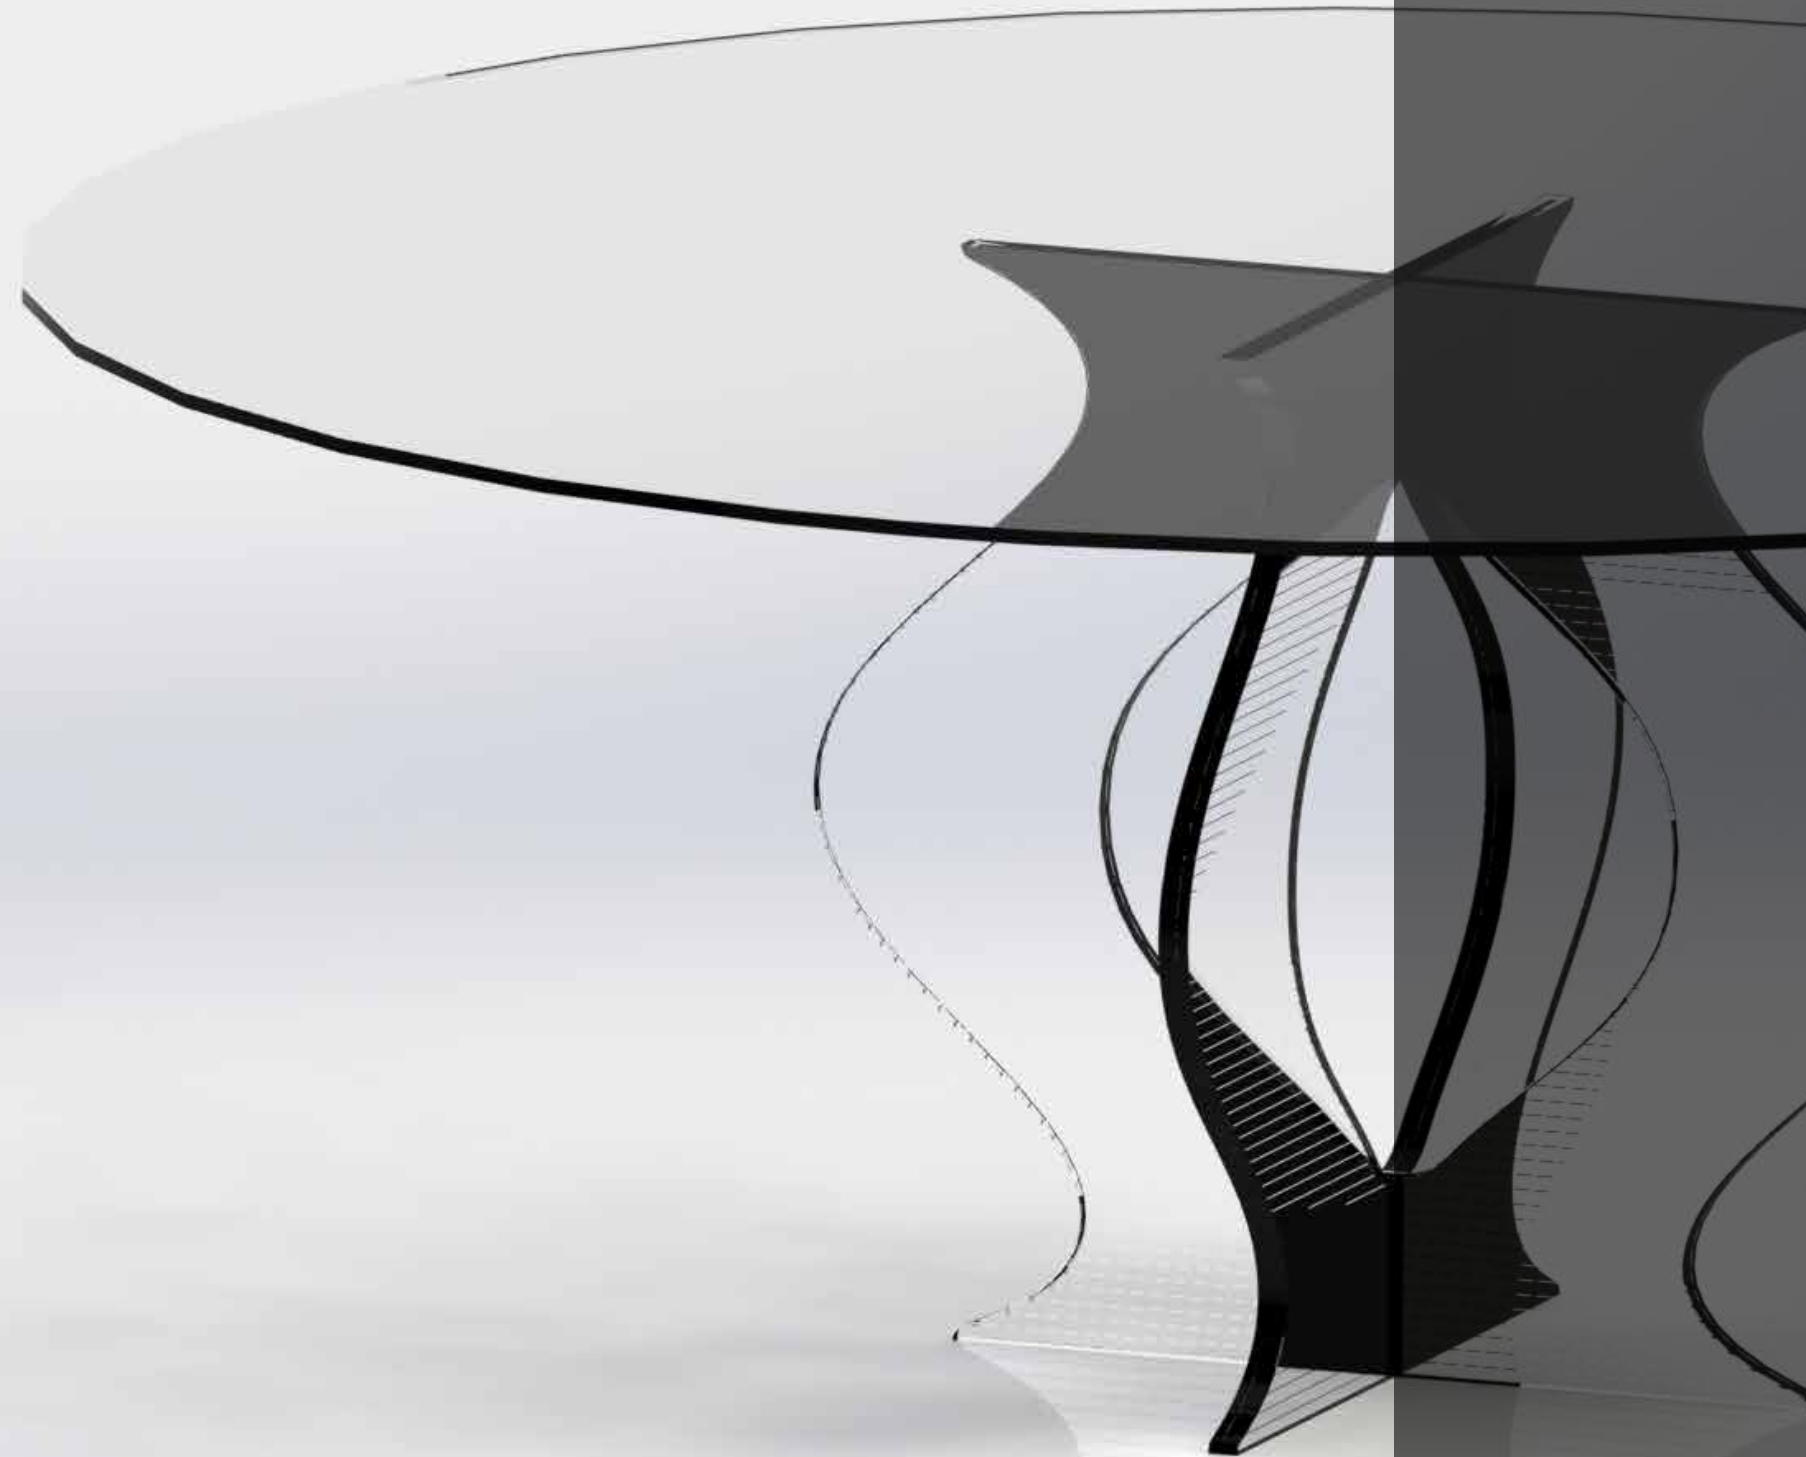

VIERRE Technology is located in Veneto, in the province of Padua, 50 kms far from Murano (Venice). This strategic position allows the Company to take advantage of the skills of the students of Padua University and of their knowledge about the most modern and innovative technologies. In addition, our Company benefits of the traditional craftsmanship of Murano masters glassworkers and of the expertise

All handworks and pieces of furniture, suitable both for the house and the office, are handcrafted (by master craftsmen with a long-standing experience) and this guarantees the quality and the uniqueness of each article. For the production of our products and to simplify their use we employ the most innovative technologies both of the LED lighting and home automation fields. This is as an added value for our products and the right solution to make everyday life more pleasant. Energy conservation applied in the functionality of our products, along with the respect for the environment, through the use of recyclable and non-toxic materials, are some of our Company’s values.

ITALIAN QUALITY

Since its establishment, our Company has selected the finest materials as well as the most excellent local and multi-year career artisans. In addition to Murano glass, our Company avails itself of precious woods, wrought iron, marble, stainless steel, aluminium alloys, and pays particular attention to the testing of innovative materials (the research for new materials is continuous). All articles are handcrafted and modelled by professional hands in every single phase of their creation. During all stages of the production process, all products undergo an accurate quality control, ensuring the quality of a product “100% Made in Italy”. Finally, to ensure their authenticity, in each item is located a RFID tag that, read by a Smartphone provided with NFC technology, allows the customer to obtain both detailed information of the manufacturer.

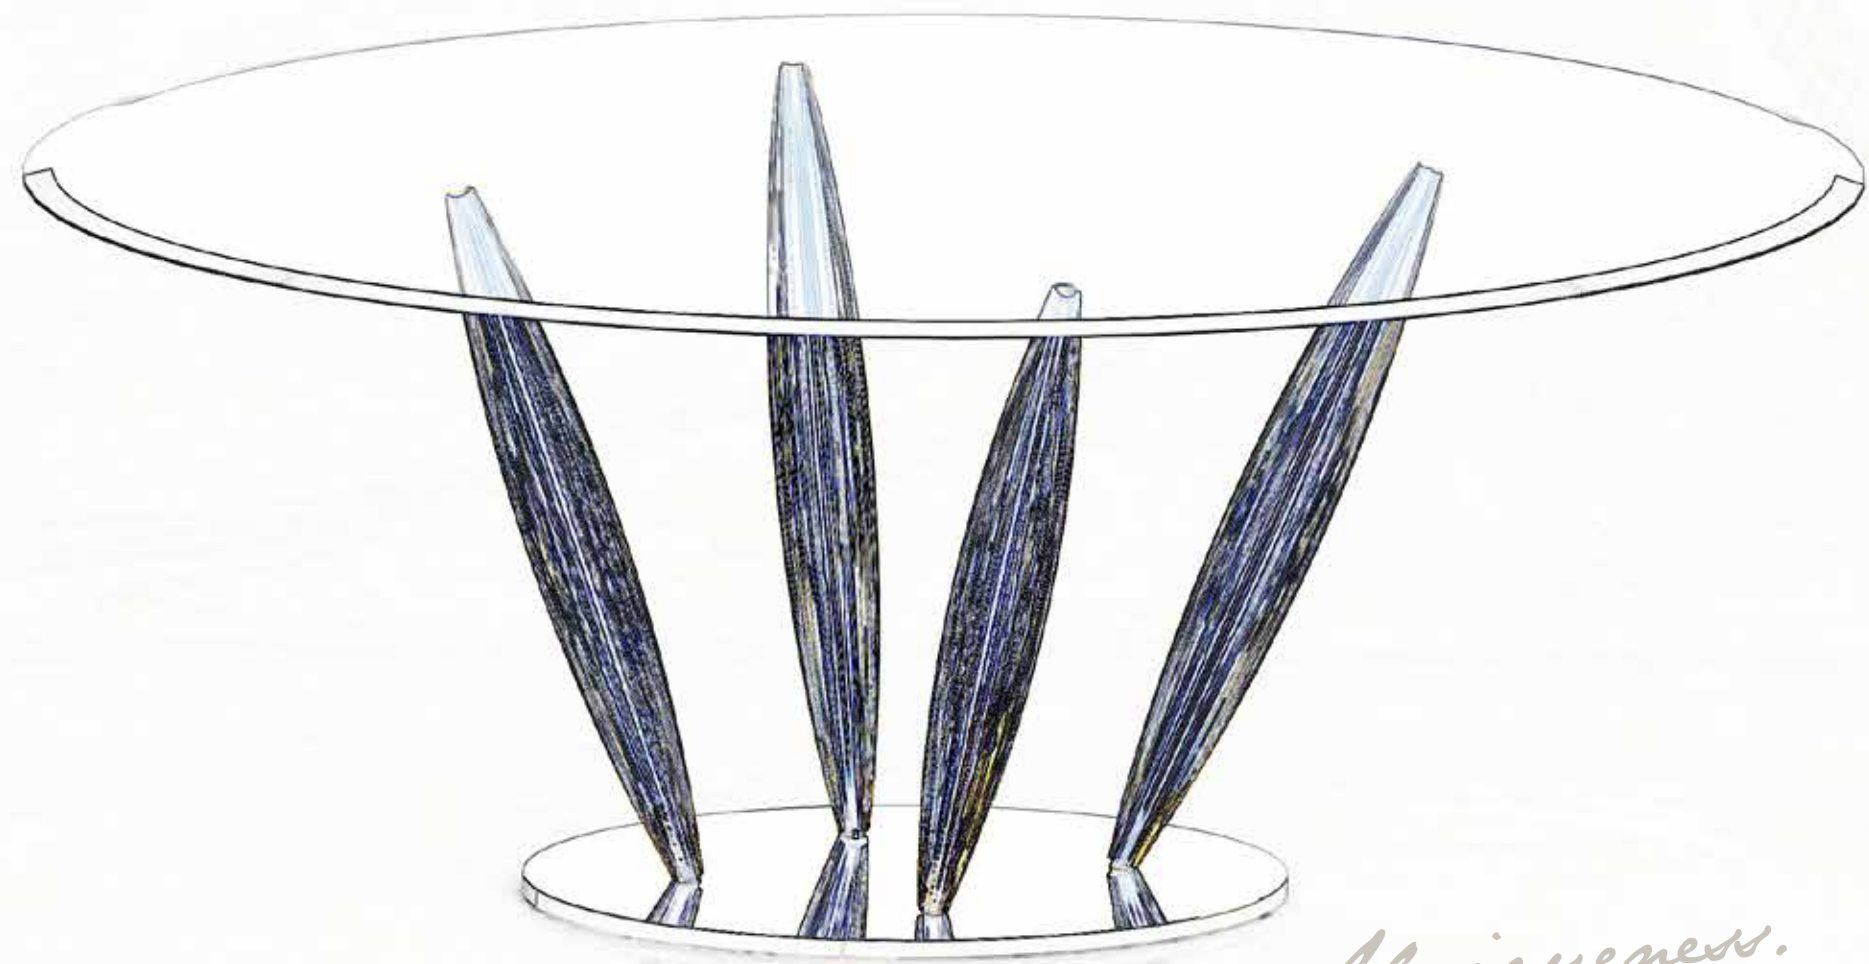

Vierre Technology presents a line of furniture we call **NEW STYLE**, which we can define as a collection of “classic/modern” furniture pieces.

They are modern due to the use of lines and simple geometric shapes, using innovative materials as well. They are classic in an evergreen sense, because they will never go out of style, made with classic materials such as precious wood, original artistic venetian glass, marble, etc.

In this line of products, as for the chandeliers, the most innovative eco-friendly technologies are used, such as LED light.

The materials are always nontoxic. Furthermore, only FSC (Forest Stewardship Council) certified wood is used.

When Value means Uniqueness.

NEEDLETEC

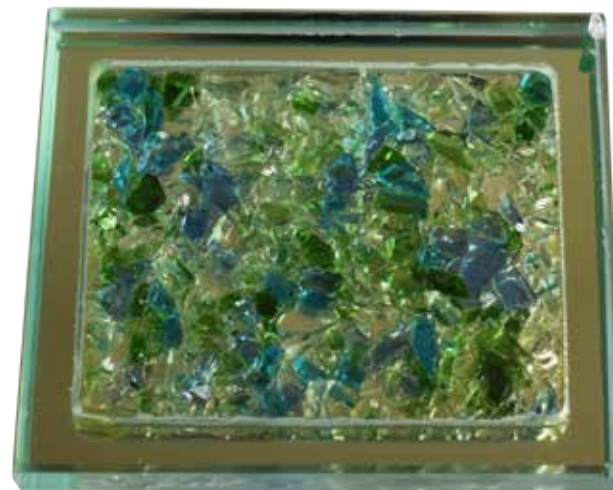

Fantasy Collection

Examples of furniture pieces dedicated to children. They can be made of either hardened security glass in various color tones, or precious wood; both of which are composed of nontoxic materials. In these designs, attention is placed entirely on child safety.

Some samples of materials used to make our creations

Crackle glass: "Diamond effect" multi-stratified flat glass that is hand-crafted. A series of glass crystals are put together to form irregular web-like designs, which can be used to make tabletops, end tables, and table supports, etc.

Artistic Images samples: Using multicolored Murano glass grit, we create figures at the choice of our client. These products are completely hand-crafted.

Glass portrait samples: We print images chosen by our clients using an innovative technology, in high definition and multiple colors. The hardening of the glass ensures that it is long lasting, and resistant to scratches and breakage

Vierre Technology allows the possibility to adorn details of their products with **Swarovski®** crystals. We will offer a variety of options for these personal designs.
